

Regression

Friday, 19 July 2024 2:05 PM

The Data should be Linear.

We need to find Relation
b/w x & y where y is
your dependent variable and
 x is your independent
variable.

Assumption of regression line

1. The relation between the dependent and independent variables should be almost linear.
2. There should not be multicollinearity in regression model.
Multicollinearity generally occurs when there are high correlations between two or more independent variables.
