

L1 (Lasso) Regularization

Monday, 22 July 2024 3:13 PM

$$\text{Cost function} = \sum (h_0(\hat{y}_i) - y_i)^2 + \lambda |\text{slope}|$$

Advantages →

- 1- It helps to overcome with overfitting
- 2- It helps in feature selection.

$$y = \alpha_0 + \alpha_1 x_1 + \alpha_2 x_2 + \alpha_3 x_3 + \dots$$

Some time we have a values near
that time cost function make
so it helps to find best
