

Cross validation

Monday, 22 July 2024 3:38 PM

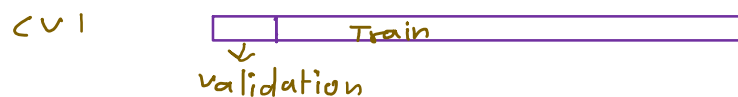

We will do validation on train data set.

Types of validation →

1- LOOCV (Leave one out cross validation)

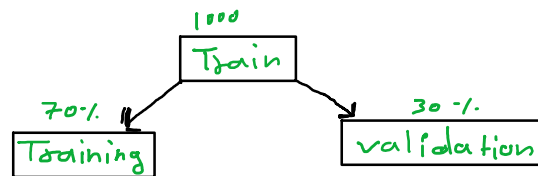

⋮

CV 1000

- 1- LOOCV Take lots of times.
- 2- overfitting.

2- Hold out cross validation →

use random_state for Randomly chosen Data

3- K fold cross validation →

Take $K = 10$

	val	Train
cv 1	100	900
cv 2	100	900
cv 3	100	900
cv 4	100	900
⋮		
cv 10	100	900

disadvantage →

1- Can not perform good in imbalanced

4- stratified K-fold cross validation →

This is same as K-fold but it will be equal to each categories in train validation.
